# Preface

This is a Quarto book.

To learn more about Quarto books visit <https://quarto.org/docs/books>.

# 1 Introduction

This is a book created from markdown and executable code.

See Knuth (1984) for additional discussion of literate programming.

The focus of this template is to be used in combination with Python programming. Therefore, an example code block is used below

```
import numpy as np
import matplotlib.pyplot as plt

r = np.arange(0, 2, 0.01)
theta = 2 * np.pi * r
fig, ax = plt.subplots(
    subplot_kw = {'projection': 'polar'}
)
ax.plot(theta, r)
ax.set_rticks([0.5, 1, 1.5, 2])
ax.grid(True)
plt.show()
```

Figure 1.1: A line plot on a polar axis

We can also make feedback diagrams.

You can also do things like adding markdown tables

Table 1.1: Demonstration of pipe table syntax

| Default | Left | Right | Center |
|---------|------|-------|--------|
| 12      | 12   | 12    | 12     |
| 123     | 123  | 123   | 123    |
| 1       | 1    | 1     | 1      |

## 2 Summary

In summary, this book has no content whatsoever.
